AKROM RUSTAMOV

PYTHON BACKEND DEVELOPER

Tashkent, Uzbekistan • +998 95 878 62 77 • akromjonrustamov56@gmail.com • github.com/RustamovAkrom
https://akrom-rustamov.vercel.app

SUMMARY

Python Backend Developer with hands-on production experience building secure, scalable systems with FastAPI and Django. Delivered backend infrastructure across asset management, CRM, and e-commerce systems — including RBAC with audit logging, REST APIs, async task processing, and CI/CD pipelines. Worked across freelance client projects and a government institution contract, shipping full-stack services from database design to deployment.

WORK EXPERIENCE

Backend Developer & System Designer — Contract Project (Gov Institution) **2026 - Present**

- Designed and built an asset registration and tracking module from scratch, replacing manual record-keeping processes.
- Implemented RBAC system with four permission tiers (staff, manager, approver, admin), preventing unauthorized data modification.
- Introduced an audit logging system covering all critical actions, enabling full traceability for compliance requirements.
- Configured background task processing with Celery + Redis to handle asynchronous operations without blocking API response times.
- Deployed the system to a dedicated production server using Docker and NGINX, ensuring stable uptime.
- Covered API endpoints with Pytest to catch regressions before deployment.

Full-Stack / Backend Developer - Freelance **2024 - 2025**

- Designed and delivered REST APIs and backend services for multiple clients, translating business requirements into working systems.
- Built Telegram bot integrations using Aiogram3 connected to Django Admin panels, giving clients a no-code way to manage bot content.
- Deployed complete project stacks to VM servers using Docker Compose and NGINX, cutting manual deployment steps.
- Set up CI/CD pipelines with GitHub Actions covering linting, automated testing, security checks, and deployment.
- Integrated Prometheus, Grafana, and Loki for monitoring and centralized log collection, reducing time to detect production issues.

KEY ACHIEVEMENTS

- Designed and shipped a production RBAC + audit-logging system for a government institution, covering 4 permission tiers and full compliance traceability
- Delivered end-to-end backend infrastructure - from API design to Docker/CI/CD deployment - across 3+ freelance client projects
- Built and deployed a full-stack e-commerce platform and AI-integrated Telegram bot, spanning FastAPI, Next.js, and LLM integrations
- Ranked 26th across Asia in the CAU Teach Hack cybersecurity competition (Central Asian University)

EDUCATION & COURSES

International Digital University (IDU) - Tashkent, Uzbekistan
Cybersecurity, 2nd year | 2025 - Present

- *Cybersecurity specialization; foundation year covered programming fundamentals, frontend, and business management.*

Najot Ta'lim - Tashkent, Uzbekistan
Python Backend Django Certificate | 2022 - 2023

- *Completed Python Advanced, Django Backend, and PostgreSQL tracks — hands-on, project-based training with real deployments.*

PROJECTS

E-Commerce — Full-Stack Platform
Production-ready e-commerce platform built with a near-microservice architecture — separate backend, frontend, and Telegram bot services. Integrated PostgreSQL, Redis, and MinIO for data storage, caching, and file management. All services orchestrated through a single Docker Compose production setup.
FastAPI · SQLAlchemy 2.0 · PostgreSQL · Redis · MinIO · Aiogram3 · Next.js · Docker · NGINX
github.com/RustamovAkrom/E-Commerce

DeepSeek AI Telegram Bot
AI-powered Telegram chatbot integrated with DeepSeek models via OpenRouter. Supports per-user model selection, language preferences, and persistent conversation history, built on an async architecture separated into database, service, and handler layers.
Python · Aiogram3 · SQLAlchemy · PostgreSQL · DeepSeek API · OpenRouter · Docker
github.com/RustamovAkrom/DeepSeek_TelegramBot

WebRTC Video Chat
Real-time video communication system built on WebRTC and WebSocket, with a signaling server handling peer-to-peer connection negotiation and ICE candidate exchange. Backend and frontend deployed as separate containerized services.
Python · WebRTC · WebSocket · JavaScript · Docker
github.com/RustamovAkrom/WebRTC-Video-Chat

SKILLS

Backend Core:
FastAPI, Django, Django Rest Framework, Aiogram3, Pydantic, Pytest, Websocket, Celery, asyncio, async/await, REST API Design, JWT, OAuth2

Database & DevOps:
PostgreSQL, Redis, RabbitMQ, Django ORM, SQLAlchemy, Alembic,
Docker/Docker Compose, NGINX, CI/CD - GitHub Actions, Linux

Languages:

- Uzbek (Native)
- Russian (B2)
- English (B2)
